

Industry	$\hat{\beta}$	$\hat{\alpha}_K$	$\hat{\alpha}_L$
311 Food products	0.599	0.239	0.176
312 Other food products	0.582	0.221	0.312
313 Beverages	0.289	0.449	0.120
314 Tobacco [†]	0.266	0.166	0.198
321 Textiles	0.387	0.322	0.284
322 Wearing apparel	0.347	0.161	0.387
323 Leather products [‡]	0.565	0.000	0.569
324 Footwear	0.430	0.142	0.428
331 Wood products	0.321	0.111	0.594
332 Furniture [†]	0.356	0.206	0.477
341 Paper products	0.495	0.142	0.365
342 Printing and publishing	0.343	0.270	0.352
351 Industrial chemicals	0.342	0.394	0.206
352 Other chemicals [‡]	0.413	1.000	0.256
353 Petroleum refineries	0.462	0.425	0.180
354 Petroleum and coal products	0.610	0.011	0.135
355 Rubber products	0.422	0.097	0.233
356 Plastic products	0.497	0.287	0.223
361 Pottery and china	0.247	0.178	0.641
362 Glass products [‡]	0.276	0.565	0.000
369 Non-metallic minerals	0.244	0.331	0.606
371 Iron and steel	0.383	0.194	0.351
372 Non-ferrous metals	0.475	0.258	0.331
381 Metal products	0.409	0.232	0.391
382 Non-electrical machinery	0.383	0.255	0.415
383 Electrical machinery	0.400	0.220	0.334
384 Transport equipment	0.441	0.225	0.429
385 Professional equipment	0.332	0.171	0.482
390 Other manufacturing	0.337	0.239	0.431

Output elasticities of materials ($\hat{\beta}$, from the first stage on corporations), capital ($\hat{\alpha}_K$) and labour ($\hat{\alpha}_L$), with instrument m_{it-1}^* , for every industry used in the stage-2 estimation of the detection and evasion-cost parameters. Point estimates. [†] The optimizer stopped with a warning (convergence code 52) for this industry. [‡] An estimate is at the bound of the $[0, 1]$ parameter space.
