

Claims (raw, no control variate), conservative test (Theorem F.1) – 9 tested . points

Red = passes at 95% (.2..=18.3); gray × = rejected. Gray band = . = 0's own passing interval, for visual reference.

Claims_i(Δ) = τ_{tilde}_P*[M_i+(1-q(e'))e'] -- the purchases-side credit claimed, legitimate plus undetected fraudulent. Excludes t1 (sales-tax revenue), fixed and unaffected by this policy.
