

A 3D scatter plot showing the relationship between $\log_{10}(\lambda)$ (vertical axis) and δ_1 (horizontal axis, ranging from 3.5 to 5.0) and δ_2 (depth axis, ranging from 0.4 to 0.7). The vertical axis ranges from -6.25 to -6.10. The plot displays two data series: 'Passes conservative test' (pink dots) and 'Fails conservative test' (blue dots). A single pink dot is visible at approximately $\delta_1 = 4.2$, $\delta_2 = 0.5$, and $\log_{10}(\lambda) = -6.25$. Numerous blue dots are scattered throughout the volume, representing points that fail the conservative test. Dotted lines connect the points to the base plane.

Ball size ~ p-value of the conservative test (bigger=more significant). Pink=passes, blue=fails. Min at d1=4.3 d2=0.54 lambda=5.43e-07.
