

Stage-2 lambda grid: test-inversion pass/fail at every tested point

Re-swept with the fixed (floored + exp-bounded) h' score moment. Open circle = argmin within that trim level.
Reject if $TS=2n[Lhat-\min(Lhat)] > \chi^2_{\{8,0.95\}}=15.51$. x-axis is discrete/equally-spaced, not proportional to trim %.
