

Δ	Claims per firm-year			Total claims		Behavioural share
	Estimate	95% set	$TS_{\min}$	(A)	(B)	
−10%	1,736	[1,484, 1,995]	20.3	24.1	53.0	0.07
−5%	1,840	[1,591, 2,076]	22.3	25.5	56.0	0.09
0	1,949	[1,672, 2,215]	20.7	27.0	59.1	–
+5%	2,086	[1,775, 2,357]	20.9	28.8	62.5	0.26
+10%	2,197	[1,911, 2,493]	22.6	30.3	65.6	0.19
+20%	2,451	[2,142, 2,763]	21.5	33.7	72.3	0.20

Real pesos. Estimate and 95% set: mean claims per firm-year, ELVIS interior firms (12,050 firm-years); conservative test, $TS \leq \chi^2_{18,.95} = 28.86$. (A) evader industries: interior firms plus the trimmed top 0.5% (claims scale with the rate); (B) whole economy: (A) plus corner firms (claims scale with the rate); totals in millions over all firm-years. Behavioural share: part of the change in (A) not explained by the rate change at the baseline claims.
