

Elasticity	Δ	Estimate	95% set	$TS_{\min}$
Claims (total)	$\pm 1\%$	1.170	[1.129, 1.213]	20.9
Behavioural	-2%	0.12	[0.11, 0.13]	23.4
	-1.5%	0.13	[0.12, 0.14]	23.4
	-1%	0.14	[0.13, 0.16]	20.7
	$+1\%$	0.21	[0.20, 0.22]	23.2
	$+1.5\%$	0.22	[0.21, 0.23]	23.3
	$+2\%$	0.23	[0.21, 0.24]	23.6

ELVIS interior firms, structural parameters fixed at the operating point. Claims (total): elasticity of mean claimed deductions with respect to τ_P , central difference at $\pm 1\%$. Behavioural: $[C(\Delta) - (1 + \Delta)C(0)]/\Delta C(0)$, the part of the response that comes from firms changing their overreporting; its set treats $C(0)$ as known. 95% sets: conservative test, $TS \leq \chi^2_{18,.95} = 28.86$.
