

Industry	Mean of $\mathcal{V}$	95% CI
311 Food products	0.02*	[-0.01, 0.08]
312 Other food products	-0.01	[-0.15, 0.14]
313 Beverages	0.18***	[0.05, 0.32]
321 Textiles	0.13***	[0.09, 0.24]
322 Wearing apparel	0.2***	[0.07, 0.32]
323 Leather products	-0.19	[-0.26, -0.08]
324 Footwear	0.07**	[-0.01, 0.23]
331 Wood products	0.24***	[0.04, 0.47]
332 Furniture	-0.03	[-0.27, 0.2]
341 Paper products	-0.05	[-0.17, 0.06]
342 Printing and publishing	0.07**	[-0.02, 0.19]
351 Industrial chemicals	0.09	[-0.13, 0.33]
352 Other chemicals	0.06**	[-0.01, 0.16]
356 Plastic products	-0.1	[-0.17, -0.05]
369 Non-metallic minerals	0.2***	[0.06, 0.43]
381 Metal products	-0.01	[-0.09, 0.07]
382 Non-electrical machinery	-0.02	[-0.09, 0.08]
383 Electrical machinery	0.04	[-0.04, 0.17]
384 Transport equipment	-0.13	[-0.24, 0.01]
390 Other manufacturing	0.04	[-0.15, 0.24]

Mean of $\mathcal{V}_{it} = \ln(\rho_t M_{it}^* / P_t Y_{it}) - \ln \hat{\beta}$ among unincorporated firms, where $\ln \hat{\beta}$ is the mean log materials share of corporations. Under the null of no overreporting the mean is zero; the alternative is a positive mean. Basic (pivotal) bootstrap confidence intervals (250 replications; plants resampled separately within corporations and within unincorporated firms). *, **, *** denote significance at the 10%, 5%, and 1% levels (one-sided). The intervals are two-sided, so a one-sided rejection at 5% can coexist with an interval that includes zero.
